

Since 1993, Metacast® has been a leading provider of weather graphics solutions worldwide. With clients on six continents, producing cutting edge, real time, high quality and high value graphics in dozens of languages and font systems, Metacast has established a reputation for highly reliable and brilliantly attractive data-centric graphics.

HERE ARE 5 REASONS YOU NEED METACAST

- 1. Data Freedom.**

Metacast solutions are designed to accept any data, from standard World Meteorological Organization (WMO) formats to proprietary data and image formats. You can choose to take your own data into production or our use our services for data provisions.
- 2. Adaptable.**

Metacast is one application in a flexible Linux environment that allows for many use cases. From automatic weather content rendering to serving a multi-site organization with centralized production and distributed live presentation has made Metacast a product in daily use all over the world.
- 3. Make more of your data.**

Meteorologists love to use Metacast as they can refine the presentation based on built in tools that help find and highlight the relevant data causing today's weather. One can even create derived data products from existing data. Products like wind chill, 24-hour temperature change or your own "do-I-need-my-sunglasses-tomorrow" weather are possible with the built-in tools. Communicate with your viewers on your terms.
- 4. Efficient in operation.**

Day to day operations of a Metacast solution is simple and easy to learn. The user interface caters for both the Meteorologist with tools for placing and editing data as well as for the presenter with drag and drop organization of the daily templates and a clicker to support the live presentation.
- 5. 24-hour phone support and free software updates.**

Your critical operations are secured with phone support and long-term maintenance; including free software updates that are included in the SLA. Metacast on Linux offers remote support, which allows ChyronHego technical support to remotely address issues with your systems, if needed.
